PROFESSIONAL SUMMARY

Software Engineer with a strong foundation in backend and full-stack development, focused on building scalable, secure, and user-centric applications. Proficient in developing solutions using Go, React.js, Node.js, PostgreSQL, and RESTful APIs, with hands-on experience in authentication systems, microservices, and CI/CD practices. Familiar with Agile methodologies and committed to software engineering best practices, including clean architecture, code reviews, testing, and collaborative Git-based workflows. Passionate about integrating emerging AI technologies such as LLMs and LangChain into modern applications, while leveraging a background in Data Science to deliver reliable and impactful software solutions.

Technical Skills

Languages: GO, Java, Python, C

Frontend: React.js, Redux Toolkit, React Router, HTML5, CSS3, Tailwind CSS

Backend and APIs: Node.js, Express.js, RESTful APIs, gRPC, JWT Authentication, WebSockets

Cloud & DevOps: Docker, Docker Compose, Kubernetes, AWS, Git, GitHub, Hubspot CRM, CI/CD Fundamentals,

Databases: PostgreSQL, MongoDB, Redis

Innovation AI and ML: Large Language Models (LLMs), Prompt Engineering, LangChain, Retrieval-Augmented Generation (RAG), AI Workflow Automation, AI Pipeline Design, n8n

Projects

AuthCore – Authentication & Authorization Microservice

github.com/kuku-kodes/Production-Ready-Auth-Service [🔗](#)

Go, Gin, PostgreSQL, Redis, RBAC, JWT, GORM, Docker, GitHub Actions, REST APIs

Built a production-ready authentication and authorization Microservice in **Go** featuring secure user registration, login, JWT-based authentication, refresh token rotation, and role-based access control (RBAC).

- Designed a modular backend architecture using the Repository-Service-Handler pattern with middleware for authentication, authorization, rate limiting, CORS, request logging, and input validation.
- Developed 20+ REST APIs supporting authentication, user management, and connection workflows.
- Integrated **PostgreSQL** (GORM) for persistent data storage and **Redis** for session management, token blacklisting, and rate limiting to improve scalability and security.
- Containerized the application using Docker and Docker Compose, implemented structured logging with **Zap**, automated CI using GitHub Actions, and developed unit tests to improve code quality and deployment readiness.

DevTinder — MERN Stack Developer Networking Platform

dev-tinder-web-git-main-ruler-cosco.vercel.app [🔗](#)

github.com/kuku-kodes/devTinder-web [🔗](#)

React.js, Redux Toolkit, Node.js, Express.js, MongoDB, JWT, Tailwind CSS

Built a full-stack developer networking platform using the **MERN** stack with secure **JWT-based** authentication.

- Developed **RESTful APIs** for user management, developer feed, connection requests, profile editing, and authentication.
- Implemented Redux Toolkit for state management and designed a responsive UI using Tailwind CSS and

DaisyUI.

- Deployed the application on *Vercel* (Frontend) and *Render* (Backend) with MongoDB Atlas integration and secure cookie-based authentication.

AI-Powered Lead Generation & Sales Prospecting Platform

github.com/kuku-kodes/AI-agent-.git [↗](#)

React.js, FastAPI, Python, LangChain, OpenAI, Ollama, BeautifulSoup, SerpAPI

Built an AI-powered application to discover, qualify, and analyze business leads using web search, web scraping, and LLMs.

- Automated company profiling, contact information extraction, and personalized outreach message generation using LangChain and OpenAI/Ollama.
- Developed a React frontend and FastAPI backend to provide structured lead intelligence and streamline B2B prospecting workflows.
- Integrated advanced AI capabilities to automate and streamline lead generation workflows, optimizing data processing efficiency for production readiness.

AI-Powered Customer Management System

github.com/kuku-kodes/AI-Customer-Management-System [↗](#)

Python, FastAPI, React.js, LangChain, LLMs, RAG, PostgreSQL, REST APIs, Docker

Developed an AI-powered Customer Management System to automate customer interactions, lead qualification, and support workflows using **LLMs, LangChain**, and Retrieval-Augmented Generation (RAG).

- Built scalable backend services in **FastAPI** and integrated them with a responsive **React.js** frontend through secure REST APIs for real-time AI-assisted customer engagement.
- Designed intelligent workflows for customer query resolution, conversation context management, and personalized response generation by combining LLMs with structured business data.
- Implemented data persistence using **PostgreSQL**, optimized prompt pipelines, and integrated external AI APIs to improve response quality, reliability, and workflow automation.
- Containerized the application using **Docker**, followed modular software architecture, and implemented robust error handling, logging, and API validation to ensure maintainability and production readiness.

Experience & Certificates

Internship at Teesta

Teesta Travels LLP

[View Certificate](#) [↗](#)

Generative AI: Prompt Engineering By IBM

Certificate Id: 2YEWCK8KELM

Education

JSS Academy of Technical Education, Noida

Nov 2022 – July 2026

B.Tech in Computer Science (Data Science)

GPA: 7.8/10.0

Technical Highlights

- Developed **40+ REST APIs** across backend, authentication, and AI-powered applications using Go, Node.js, and FastAPI.
- Built **production-ready backend services** using Go and FastAPI following clean architecture, modular design, and scalable software engineering practices.
- Implemented secure authentication and authorization using **JWT, RBAC, Redis-based session management, token blacklisting, and Docker** for containerized deployments.
- Hands-on experience with **CI/CD, GitHub Actions, Git-based workflows, Docker, and Agile software development methodologies**.
